

PolEvator™ Installation at Penn State University

The Penn State University Police Department was looking for a cost-effective way to monitor more of the campus. An obvious solution involved placing cameras on top of the highest point on campus - Beaver Stadium. Access to the cameras became a major concern, but that problem was solved with the PolEvator™.

Beaver Stadium, home of the Penn State Nittany Lions

The PV16W was used for the scoreboards. A hole was cut into the roof and the poles were mounted to the internal skeleton.

“The PolEvator™ was chosen because it made maintenance much easier,” said Paul Morroco, owner of installing company MES, “we were placing poles on top of the scoreboards, which made them impossible to reach with bucket trucks.”

A total of four PolEvatots are at the stadium, one each on the end zone scoreboards, one on top of the luxury boxes, and one on top of the press box. The cameras are used for monitoring of the stadium and surrounding areas during games, and are also used to monitor the traffic patterns and the campus itself at all times. Monitoring is done at PSU Police headquarters.

Servicing is quick and easy. The camera is lowered to the roof level with a drill. No bucket trucks or long ladders precariously placed high in the sky.

The cameras offer quite a view of the stadium, adjacent basketball field house, parking lots, surrounding roads, and other campus areas.
